MEASURING UP FOR A DOOR

We recommend that you measure the opening for the door, rather than an existing door, for the most accurate fit.

PLEASE NOTE: Take into account any flooring or carpet that you may put in before the door. The depth of this should be taken out of the height measurement.

- 01** Measure the height of the opening on the left side, the centre, and the right.
- 02** Measure the width of the opening at the top, the centre, and bottom.
- 03** Take the three measurements and average these out to get an accurate size. Make sure to do this for both the height and width.
- 04** The last measurement is the thickness. You can measure your existing door, about handle height for this. If you do not have an existing door in this opening then don't worry, a standard door will typically be 35mm.

- 05** The next step is to find your perfect door in our collection. Choose a size that is the closest to your height, width and thickness.

REMEMBER: YOU CAN TRIM 32MM OFF THE HEIGHT AND WIDTH OF THE DOOR.

IS YOUR DOOR NOT A STANDARD SIZE?

DON'T FRET! VISIT OUR BESPOKE SITE FOR YOUR

PERFECT DOOR:
